

All public economic data in one open platform

An open platform

One website aggregating global data and one API (`api.db.nomics.world`).
Data series delivered in various formats (CSV, JSON, SDMX, HTML).
Direct access from your statistical software (R, Matlab, Python, Excel).

Automatic updates

Data series are available upon release by the provider.
Keep your economic dashboard and economic indicators up-to-date.
Each revision is archived to build a real-time database.

Reproducible results

Each data series has a unique ID.
You can retrieve the exact dataset researchers used, and reproduce the same results using their code.
We are currently working on a Dynare plugin.

Data from the world's major institutions are already included

Free data and free code
